European Sustainable Development Week 2026.

We will present the activities we carried out as part of the **European Sustainable Development Week**. We focused on raising environmental awareness and protecting the environment, as well as on the active involvement of students in and contribution to the local community.

Our target groups were **students and people with fewer opportunities living in our local community**. We collaborated with the **Association of Persons with Disabilities** and a **nursing home for older people**.

1. **Walking Day** - The whole school took part in a **walking activity** aimed at encouraging walking and reducing the use of cars and buses for transportation.

2. **Clean-Up Action** – Students walked through the local natural surroundings and collected litter to highlight the importance of keeping our environment clean and protecting nature.

3. **Zero-Waste Cooking Workshop –** As part of the extracurricular activity Italia tra arte e cucina, students prepared a dish using surplus fruit in order to use it before it spoiled and reduce food waste.

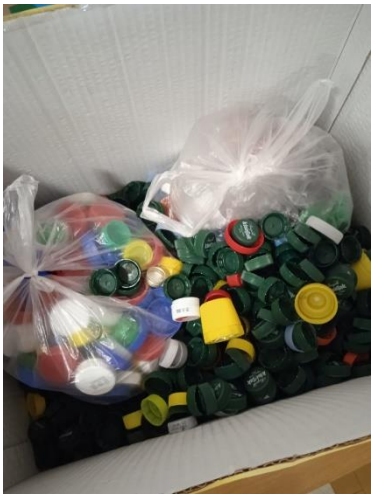

4. **Bottle Cap Collection Campaign –** An environmental and humanitarian campaign was organized to collect plastic bottle caps and donate them to an association supporting people affected by malignant diseases. The collected bottle caps are exchanged for financial donations, which are then used to purchase medicines for patients.

5. **Flea Market / Swap Event** – Students exchanged items they no longer needed, including clothes, school supplies and books. The aim was to encourage students not to throw things away, but to learn how to exchange and share them with others, while promoting the reuse of pre-owned items.

6. **"Say NO to Food Waste" workshops** – a workshop for students featuring an educational story about handling surplus food and related activities.

7. **Repurposing items** – making pencil holders out of toilet paper rolls. Students learned how seemingly useless items can be put to practical use!

8. **Planting herbs** – students planted herbs in the courtyard in front of the school. These herbs will be used for cooking during the "Italia tra arte e cucina" extracurricular activity.

9. **Visit to a home for the elderly** – through socializing and playing games, students developed greater sensitivity towards the elderly.

10. **Visit to the Society of the Disabled** - helping users keep their yard clean and tidy, which helped students develop social skills and awareness for those in need.

As part of European Sustainable Development Week, students participated in numerous educational activities that fostered their social skills and activism, while also raising awareness about the importance of taking action for sustainable development. We will continue to organize similar activities so that they take place throughout the entire school year!
